

# DEUTZ PowerBlue

Additive urea solution with improved active formula

**DEUTZ SERVICE.** We care. We support. We deliver.

## DEUTZ PowerBlue – Additive power for exhaust after-treatment

With DEUTZ® PowerBlue, you can increase the availability of your machines and decrease your maintenance and operating costs. DEUTZ PowerBlue can be used in the place of conventional AdBlue® / DEF and is an additive urea solution that is based on a urea solution in accordance with ISO 22241.

### USE CASE

At low exhaust gas temperatures due to low engine-side capacity, many start-stops or low outside temperatures, the urea solution used cannot fully take effect and unwanted by-products, such as crystals, may be produced. These can lead to a blocking of the catalytic converter as well as the mixing pipe.

### PRODUCT ADVANTAGES

DEUTZ PowerBlue improves the injection pattern of the urea solution into the exhaust flow through special active ingredients. A complete transformation of the urea solution is also possible at lower operating temperatures and unplanned
