DEUTZ OIL CHECK
The fitness test for your diesel engine

DEUTZ SERVICE. We care. We support. We deliver.

Increase the availability of your machines.
The analysis of lube oil provides reliable early indication of increased wear and impending equipment failure – long before it actually becomes a problem!

Your benefits at a glance:
- Preventative repairs based on early identification of increased wear of engine components.
- Avoid costly damage and engine failures.
- Prolong the change interval of your lube oil up to 1,000 operating hours.
A few simple steps to your personal engine diagnosis.

Fill 100 ml of lubricating oil into the sample jar. Send the lubricating oil sample to our lab. Access your analysis under https://www.eoilreports.com.

The most important wear indicators at a glance

Wear elements
The elements examined by the oil check provide valuable information on the wear of various engine components.

Soot
An increased soot concentration can be the result of a technical problem, such as a malfunction of the injection system or the turbocharger.

Water
Increased water contamination can be caused by internal leakage of the cylinder head gasket.

Fuel
Fuel contamination can be caused by wear in the injection system or incomplete combustion.

The DEUTZ Oil Check provides you with a detailed picture of your engine's condition as well as concrete recommendations for action. For more details, please visit www.deutz.com/deutzoilcheck or get in touch with your local DEUTZ Partner!
