

DEUTZ PREMIUM ADDITIVES

Always the right solution

DEUTZ SERVICE. We care. We support. We deliver.

Boost your performance.

Our new DEUTZ Premium additives are high-performance solutions – to help you get the most out of your engine!

NEW OFFER

OPTIMISED
SOLUTIONS
FOR YOUR
DIESEL ENGINES

The right solution for every application:

- DEUTZ PowerBlue: Optimised urea solution - especially for low temperatures
- DEUTZ InSyPro®: 2-1 Diesel additive - especially for use with biodiesel blends
- DEUTZ StartBoost: Fuel additive to increase starting reliability after long standstill
- DEUTZ FlowBoost: Fuel additive to increase cold resistance

The engine company.

OUR SOLUTIONS AT A GLANCE.

DEUTZ PowerBlue

The optimised alternative to the conventional DEF / AdBlue®: DEUTZ PowerBlue improves the spraying behaviour of the urea solution into the exhaust gas stream through use of special additives. This reduces crystallization, which in turn increases machine uptime saving maintenance as well as fuel costs. DEUTZ PowerBlue is particularly suitable for low ambient temperatures, applications with low loads and with many start-stops.

DEUTZ InSyPro®

The 2-in-1 diesel additive for modern engines with the highest demands on diesel fuel quality - especially with the use of biodiesel blends. As a fuel stabilizer, it increases the shelf life of the diesel fuel, prevents deposits and guarantees safe engine start after long shutdowns. As a shock cleaner it dissolves deposits in the injection components and prevents reduced engine performance and increased fuel consumption.

DEUTZ StartBoost

The specialised diesel additive for critical applications with low fuel tank throughput like emergency power generators and auxiliary engines. DEUTZ StartBoost increases the storability of diesel fuel, and protects tanks and fuel systems against microbial contamination. The ignition behaviour is improved by use of a cetane number improver - increasing your engine's start-up reliability even after a long period of standstill.

DEUTZ FlowBoost

The powerful fuel additive for increasing the cold resistance of diesel fuel. DEUTZ FlowBoost reduces the minimum usage temperature by up to 10 °C, which allows a longer use of summer and transitional diesel. Special additives prevent the generation of large paraffin crystals, protecting the fuel lines and filters against clogging.

| Product | Spare part no. | Unit |
|------------------|----------------|--------|
| DEUTZ PowerBlue | 0101 6546 | 10 l |
| | 0101 6547 | 208 l |
| | 0101 6548 | 1000 l |
| DEUTZ InSyPro® | 0101 7967 | 1 l |
| | 0101 7968 | 5 l |
| DEUTZ StartBoost | 0109 1262 | 1 l |
| DEUTZ FlowBoost | 0109 1260 | 1 l |
